| Version | Date              | Change      |
|---------|-------------------|-------------|
| 1.0.0   | 05 May, 2021      | First Draft |
| 1.0.1   | 12 January, 2022  |             |
| 1.0.2   | 17 February, 2022 |             |
|         |                   |             |
|         |                   |             |
|         |                   |             |

## **API Introduction**

This API is an interface allowing external applications to communicate with Againgency based on a unified abstract interface.

This interface detaches the concept from a physical database structure and provides additional business logic and security when accessing the data.

## **Intended audience**

This document is intended to the third party software vendors who are developing a system which needs connectivity to Againgency.

This document is intended for distribution to all vendors and developers of hospitality software systems.

The data contained herein is public information and is published for public use.

However, if you have received this copy from a company other than Ecommpay, you may want to contact us to ensure that you have the most recent version of this document.

## **System Overview**

### **Provided functions.**

The API provides the following functionality:

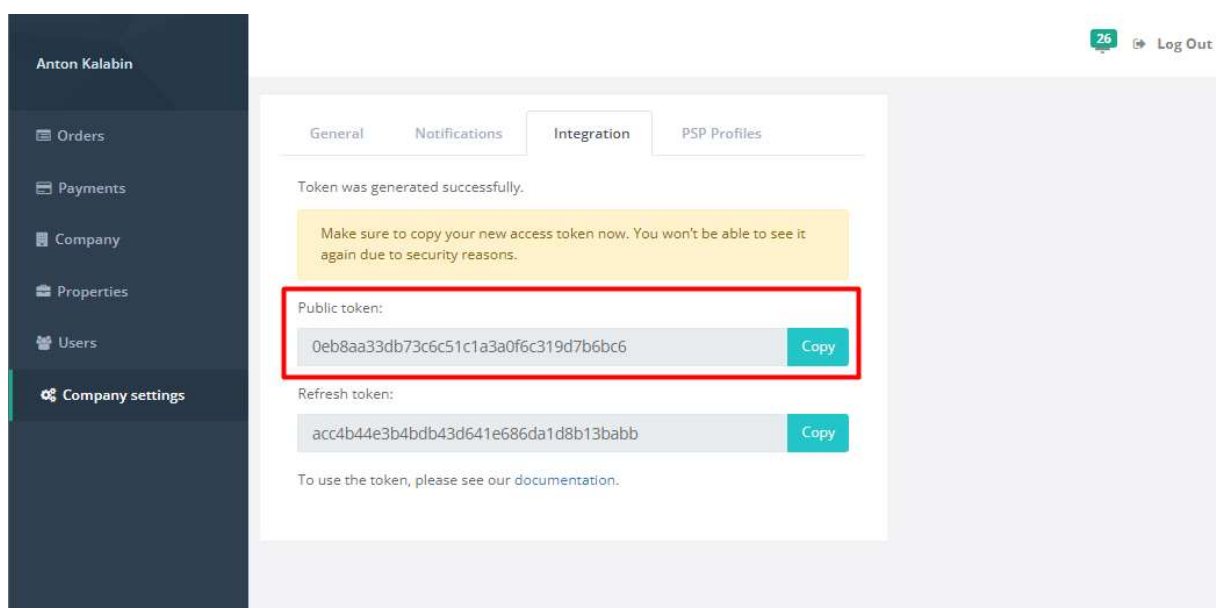

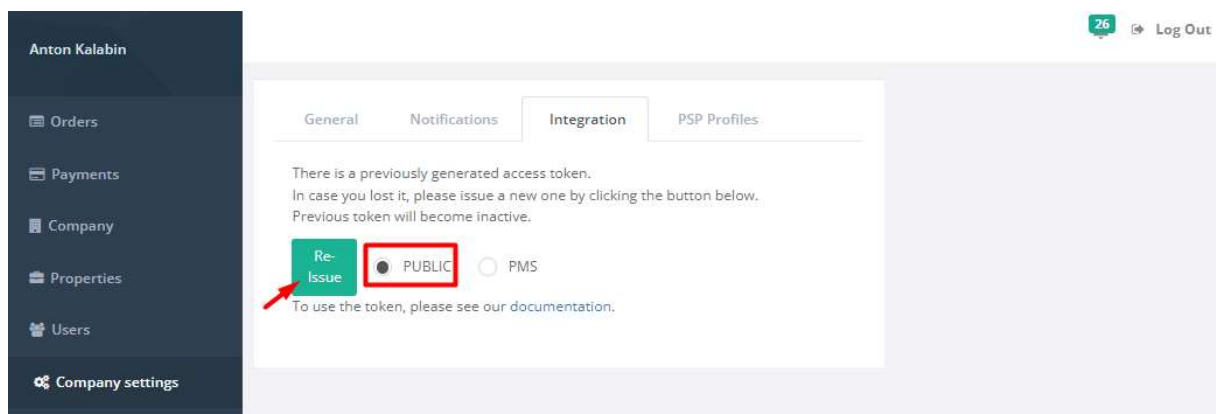

- Order lookup
- Order update
- Order creation
- Payment lookup
- Payment update
- Payment creation
- Tender lookup
- Tender creation
- Transaction lookup
- Property lookup
- User lookup

## **Fields available for selection by request type**

Specification for Againgency Common API available on

<https://api.againgency.com/docs>

API key can be generated from <https://deck.againgency.com/settings#integration> (screenshot bellow)

You can generate a Token for each user of Againgency.

### Notes:

- If you don't have an option "Integration" in Againgency – send a letter to [Againgency@ecommpay.com](mailto:Againgency@ecommpay.com)
- Public Token will expire in 30 days, you need the "Refresh token" to be able to refresh it before it expires.

### Example of Token:

URL Request: <https://api.againgency.com/auth/v0.2/token>

```
{
  "payload": {
    "created_at": "2022-02-17T14:58:31.026713+03:00",
    "expires_at": "2022-03-19T14:58:31.026717+03:00",
    "status": "ACTIVE"
  },
  "meta": {
    "status": "SUCCESS",
    "request_id": "0da3bf05-b4d6-4bce-8943-212e65e98e36"
  }
}
```

### Refreshing Token request:

```
{
  "refresh_token": "dadeed0dc53a43d64f41adfb0a5c4f7b1oc1"
}
```

### Response:

```
{
  "payload": {
    "access_token": "3b3336f394e3d49368d1fb41d30b1398b44a",
    "refresh_token": "438fb36bb1c11438c06bc6bdd1b461d116b1",
    "created_at": "2022-02-17T15:11:56.527774+03:00",
    "expires_at": "2022-03-19T15:11:56.527776+03:00",
    "status": "ACTIVE"
  },
  "meta": {
    "status": "SUCCESS",
    "request_id": "eeb9cf84-768c-4d13-8b3f-a6ee1c451a7a"
  }
}
```

## Orders.

Orders - an entity that includes information about the payer and the subject of payment.  
Any payment transaction requires an order.

Major fields for create an order:

| # | Field name           | Type   | Description                                                                                       | Notes                                                                                                                                                     |
|---|----------------------|--------|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | External_id          | String | Order number                                                                                      | <b>Unique parameter. Mandatory.</b>                                                                                                                       |
| 2 | Currency_code        | String | Currency code in ISO 4217 format                                                                  | <b>Mandatory.</b> Examples:<br>EUR - Euro<br>USD - US Dollar<br>GBP - Pound Sterling<br>RUB - Russian Ruble                                               |
| 3 | Email                | Email  | Email for Payment link sending                                                                    | <b>Mandatory.</b>                                                                                                                                         |
| 4 | Internal_description | String | General multiline description for the order.                                                      | Use \n to split lines                                                                                                                                     |
| 5 | Positions            |        | List of elements in the order                                                                     |                                                                                                                                                           |
|   | Name                 | String | A title for the product or service as it will be displayed on payment page, invoice, receipt, etc |                                                                                                                                                           |
|   | Type                 | Enum   | Position type. Defines the behaviour and attributes sets for orders and properties                | Allowed: ACCOMMODATION   FLIGHT   OTHER<br><b>Mandatory.</b>                                                                                              |
|   | Quantity             | Number | Number of items within the position                                                               |                                                                                                                                                           |
|   | Price                | Number | Price for the single item of product or service within the position, in major currency units      |                                                                                                                                                           |
|   | Amount               | Number | Total amount of money to be paid for position, in major currency units                            | <b>Mandatory.</b>                                                                                                                                         |
| 6 | Customer             |        | Customer information.                                                                             | May be used to send notifications, invoices, receipts, perform callouts and other activities which can be initiated by Againgency system or the personnel |
|   | First_name           | String |                                                                                                   |                                                                                                                                                           |
|   | Last_name            | String |                                                                                                   |                                                                                                                                                           |
|   | Email                | email  |                                                                                                   | <b>Mandatory.</b>                                                                                                                                         |
|   | Language             | string | Language code in ISO 639-1 format.                                                                | <b>ru   en   lv</b><br>The client will receive letters in this language.                                                                                  |
| 7 | Total                |        |                                                                                                   |                                                                                                                                                           |
|   | Sum                  | Number | Total amount of money to be paid by customer, in major currency units                             | <b>Mandatory.</b>                                                                                                                                         |
